RE: **BREMERTON AUTO WRECKING LANDFILL INSPECTION REPORT**

This morning at approximately 7:45 AM I drove by the Bremerton Auto Wrecking Landfill (BAWL) on the way to work and noted that water was running down the face into Gorst Creek about 300 feet southeast of where it crosses under State Route 3 (SR3). I stopped and walked into the ravine between SR3 and the landfill face. I saw that water was running over the top of the landfill in at least 5 different flows and that a portion of the landfill face had slid down the face and possibly into the creek. I estimate the amount of material that had slid down as ten (10) cubic yards of mixed earth and solid waste. I took numerous photos of the area.

The creek was flowing through all three culverts in the top dam, the second dam and the SR3 culvert.

I informed Jan Brower of my findings and she called the Navy, Ecology -TCP , Dept of Transportation, and KC Public Works to inform them of the problems.

I called the owner Vern L. Padgett at (253) 475-0202 and left a message asking him to call me.
